

Website Design & Templates

You don't have to create your own website, you can create a simple landing page.

I still recommend having your own domain and website even if it is just a landing page as users can come across it through SEO and it gives you more authority as a business.

For those who aren't into designing a website, you can use the pre-established templates.

Website Design & Templates

One of the best ways is to explore the different templates. Via WordPress you can preview a template and make live changes, it won't change your current site, but you can see how that template will look with your own content.

Another way is to look at different websites you admire and try to recreate the different elements.

To adjust the templates here and there: there are different setting controls that go with the template; however, if you don't see one, the best is to go into the code.
